

Product Data Sheet

Brite Lites

#QUA01148

Automotive Plastic & Glass Headlight Restorer

Features

- Improves Visibility
- Leaves a Protective Coating
- One Step Process, as Easy as 1,2,3
- Repairs UV Damaged Glass & Plastic
- Will Not Harm Paint or Chrome

Description

Brite Lites is a unique one of a kind space-age product that restores and clears plastic and glass that have been damaged by UV age discoloration. Frequent use of Brite Lites helps fill tiny scratches and microscopic flaws on the surface of these materials. Use Brite Lites on headlights, windows, fairings, tail lights and side markers on automobiles, trucks, motorcycles, buses, and all marine craft. It will also remove calcium carbonate build-up on headlights thus restoring brightness which saves on replacement costs.

Applications

Restores brilliance to dull, discolored or mineral deposits on covered lights on all vehicles, home windows, emergency light-bars and even security camera lens.

Directions

Shake can before use for approximately 30 seconds. Tilt can upside down and apply a 1-2" strip of Brite Lites diagonally across the headlight. Let the foam set for 15 seconds. Using a clean cotton or terry cloth rag folded to fit the palm of your hand, work the Brite Lites into the lens until you hear a chirping sound. This tells you that Step 1 is complete. Next using a micro-fiber cloth, buff out the headlight until clear and Step 2 is complete. Repeat Steps 1 and 2 if necessary.
